

Bundling Issues

static config

move to state, dispatch from components

```
// SomeComponent.js  
componentDidMount() {  
  this.props.init(staticConfig);  
}
```

```
// SomeActions.js  
const widgets = await getWidgets({  
  environment: getEnvironment(getState())  
})
```

Bundling Issues

```
// SomeComponent.js
componentDidMount() {
  this.props.init(staticConfig);
}
```

```
// SomeActions.js
const widgets = await getWidgets({
  environment: getEnvironment(getState())
})
```

Bundling Issues

declaring `externals`

All peer deps need to be declared,
otherwise you'll bundle them!
