of thunks and state

selectors used in your thunks

are coupled to that state shape

```js
// @org/webapp-a/WidgetActions.js
const loadWidgets = (params) ⇒ (dispatch, getState) ⇒ {
  const pageNumber = getPageNumber(getState()); // 💥
}
```

# of thunks and state

selectors used in your thunks

are coupled to that state shape

```
// @org/webapp-a/WidgetActions.js
const loadWidgets = (params) ⟹ (dispatch, getState) ⟹ {
  const pageNumber = getPageNumber(getState()); // 💥
}
```

# of thunks and state

thunk adapters

wrap dispatch and getState in a transform

return a thunk!
